

Debo

Your life's memory engine

A private AI memory layer that turns voice notes, journals, screenshots, calendar context, and AI chats into searchable self-knowledge.

POSITIONING

Life intelligence, not another notes app.

debo.life | Founder: Shaswat Raj

The problem

People already capture their lives. They just cannot retrieve meaning from it.

Your memories are scattered across apps, files, and chats.

Voice notes disappear into folders. Journals do not connect. AI tools forget everything when the tab closes. Search finds keywords, not context.

PAIN #1

The useful detail is captured once, then lost.

PAIN #2

Personal context is trapped in separate surfaces.

PAIN #3

AI gives generic answers without your history.

Result: people re-explain themselves to every tool, every week.

Why now

The personal AI stack is finally ready.

AI is moving from answering questions to remembering context.

Multimodal capture

Voice, text, images, PDFs, calendars, and AI chats can now be parsed continuously.

Private memory graph

Vectors + structured memory make personal context queryable with citations.

Consumer readiness

AI companion and journaling categories are already monetizing through subscriptions.

The missing layer is trust: a product that stores personal memory privately, transparently, and usefully.

Market context: Future Market Insights digital journal apps report; Grand View Research AI companion market report; TechCrunch/Appfigures AI companion category.

The solution

Debo turns raw life context into durable memory.

Capture -> Understand -> Ask or Act

1. Capture

Record voice, journal, upload notes, import AI chats, connect calendar.

2. Understand

Extract people, dates, goals, tasks, emotions, topics, and patterns.

3. Ask / Act

Ask your life, get cited answers, draft reminders and next steps.

Debo stores meaning, not just text.

Source: Debo website and GitHub README, accessed May 17, 2026.

Product experience

Ask your past self.

Debo makes your own history feel searchable, cited, and actionable.

QUERY

"What did I say I'd do this week?"

ANSWER

"You promised to send the product review deck by Friday and follow up with design on Tuesday."

EVIDENCE

Sources: Voice note + Journal + Calendar

Example based on Debo website product copy.

How it works

An open-source private memory engine with evidence-backed answers.

Privacy architecture: encrypted, exportable, deletable, no data selling, open-source core.

Source: GitHub README tech stack and Debo website privacy section, accessed May 17, 2026.

Market wedge

Start with journaling + life memory. Expand into the personal AI OS.

A growing paid behavior sits between journaling, AI companions, and personal knowledge management.

DIGITAL JOURNAL APPS

\$6.5B market in 2025; projected ~\$21.4B by 2036.

AI COMPANIONS

\$36.8B estimated 2025 market; projected ~\$318B by 2033.

CONSUMER SPEND SIGNAL

AI companion apps generated \$221M lifetime spend by July 2025; 2025 revenue was running +64% YoY.

Debo beachhead: students, founders, creators, researchers, and professionals who already save too much context and need it back.

Sources: Future Market Insights (digital journal apps, Feb 2026); Grand View Research (AI companion market); TechCrunch/Appfigures (Aug 2025).

Business model

Subscription software for private personal memory.

FREE

Capture basic memories, ask limited questions, export anytime.

PRO

Unlimited memory, multimodal ingestion, citations, reminders/actions, advanced graph.

TEAMS / RESEARCH

Collaborative intelligence for labs, founders, families, and high-context teams.

GTM motion: build in public, open-source trust, waitlist loops, creator communities, productivity/PKM audiences, college founder networks.

Expansion: connectors, mobile, browser capture, voice-first journaling, personal API, and self-hosted privacy tier.

Traction & moat

Built in public, technically real, privacy-led.

Debo already has the foundations of a differentiated memory company.

EARLY DEMAND

Landing page states 1,000+ early adopters joined.

OPEN-SOURCE CORE

Public MIT repo with 321 commits, 18 stars, and active roadmap/issues.

TECHNICAL MOAT

Memory graph + character graph + multimodal ingestion + evidence-backed retrieval.

Trust moat: open-source auditability, encrypted/private positioning, export/delete controls, no ad-data business model.

Sources: Debo website landing page; GitHub repository metrics visible May 17, 2026. Validate metrics before sending externally.

The ask

Use capital to turn waitlist interest into retained users.

\$200k grant / pre-seed target

0-3 MONTHS

Ship MVP: voice/journal capture, memory extraction, cited Q&A, export/delete.

3-6 MONTHS

Early access launch, onboard waitlist, measure activation/retention, harden privacy.

6-12 MONTHS

Mobile/browser capture, calendar/reminder actions, paid Pro, team/research pilots.

Milestone targets: Early access - July 28, 2026. Public launch - September 17, 2026.

Sources & assumptions

For investor use: verify numbers before final submission.

Public product facts

Debo website: product positioning, early adopter claim, privacy claims, product examples. GitHub repo: tech stack, open-source core, commit/star/fork counts, roadmap/issues.

Market facts

Future Market Insights: digital journal apps market 2025/2036. Grand View Research: AI companion market 2025/2033. TechCrunch/Appfigures: AI companion app consumer spending through July 2025.

Editable assumptions

Funding ask, launch dates, pricing, and milestones should be updated with your current plan before sending to investors or grant programs.

Debo is strongest when framed as a private memory layer - not a chatbot.
